## **Martin Dental First Office in Wisconsin with Extra-Oral Aerosol Containment Devices in Treatment Rooms**

**Eau Claire, WI** – A local dental spa is the first dental office in Wisconsin to install a HEPA filtration machine that removes viruses and germs with 99.995% efficiency in each treatment room.

“While many things have changed, the safety of our patients and staff remain our number one priority. During treatment there are droplets and aerosols produced. By placing an EOS Suction System in each room, we are able to minimize the number of droplets and aerosols in the air and the spread of germs,” said Dr. Tony Martin, co-owner of Martin Dental.

Martin Dental is the first dental office in Wisconsin to have the ADS EOS Extraoral Dental Suction System in each treatment room. This machine has a medical grade filtration system with a three-layer HEPA filtration stopping virus and germs with a 99.995% efficiency.

“We want our patients and staff coming in feeling safe and know that we are doing everything we can do to reduce the spread of viruses and germs,” said Jessica Martin, co-owner of Martin Dental.

Martin Dental was founded in 2010 as a general and cosmetic dental office in Eau Claire, Wisconsin. Dr. Tony Martin offers a full array of dental services including dental exams, dental implants, root canals, and several other dental services to help patients maintain healthy teeth. Martin Dental is also the Chippewa Valley’s first dental spa, which means every visit includes the option to select any of our complimentary spa amenities to feel relaxed and comfortable each and every time you receive dental care!
